BPS[®] C1s

faster, better, simply superior

Flexible, powerful, and robust: the BPS C1s caters to the needs of every bank branch or cash center manager. This versatile and easy-to-use banknote processing system offers all the high-level functionality of its predecessor and can be easily configured to perform specific applications with maximum security. The BPS C1s, which can process up to 32 currencies, boasts speeds of 1,600 banknotes per minute for counting and authenticity, and up to 1,200 banknotes per minute for fitness detection and serial number and barcode reading, making it one of our fastest machines yet.

In addition to its high competitiveness and advanced speed, the new generation features an enlarged hopper with a capacity of up to 1,000 BN. It also has a new G+D design on its housing and GUI, as well as a larger, user-friendly 5-inch color touch screen.

www.gi-de.com/bps-c1

Fast and reliable: the most robust system in the compact segment

Universal

The BPS C1s is the perfect addition to any cash processing operation. It is highly versatile, convenient, and easy to use. And it supports an exceptional range of use cases at a low operational cost: at bank branches, cash centers, casinos, cash desks at central bank branches, currency exchange offices, public transport offices, and retailers.

Individual configuration

The flexibility of the BPS C1s means it can be adapted to suit an array of requirements, enabling rapid sorting by denomination, orientation, fitness (with six classes), and emission. The unit can also perform multi-/mixed-currency processing for up to 32 currencies, check processing, serial number reading, barcode/ticket reading, including printout on an external printer, and subsequent data processing. Four speed levels are available for the manual setting.

Easy to use

The BPS C1s is easy and intuitive to use, enabling a high degree of productivity, with two operators working in parallel

and using up to five profiles each (e.g., with quick modes). This, combined with the ergonomic design (5-inch touch screen), guarantees fast work.

High efficiency

The BPS C1s is compact, robust, and powerful. It combines ease of use with a small footprint. It is a particularly cost-efficient investment – not least because it can integrate with cash management software systems such as BPS Connect, Compass VMS, and BPS Connect Casino.

1,600

banknotes per minute

That's how fast the BPS C1s counts banknotes. This all-rounder can support any step in the cash handling process at bank branches, cash centers, and CITs

TECH FACTS

Counting speed:

up to 1,600 BN/min

Authentication speed:

up to 1,600 BN/min

Fitness testing speed:

up to 1,200 BN/min

Serial number processing speed:

up to 1,200 BN/min

Ticket reading speed:

up to 1,200 BN/min

Singler capacity:

(depending on BN quality)
1,000 BN with continuous feed

Output compartment capacity:

(depending on BN quality)
up to 350 BN

Reject compartment capacity:

(depending on BN quality)
up to 200 BN

Currencies:

up to 32 currencies

Dimensions (H x W x D):

40 x 33 x 35 cm

Weight:

~ 16 kg

Electrical specifications:

100–240 VA, 50/60 Hz

External connections:

LAN, USB – Interface for PC, USB – Interface for data exchange via USB-Stick, 2 x RS232, external display

Certificates:

CE, CB, GS
